

HUMANE ALTERNATIVES TO GLUE TRAPS

Glue traps are inhumane and result in suffering and painful death for all animals. Humane alternatives are available!

1. Prevention

The best method of rodent control is prevention. This can be achieved by eliminating food sources and removing nesting sites.

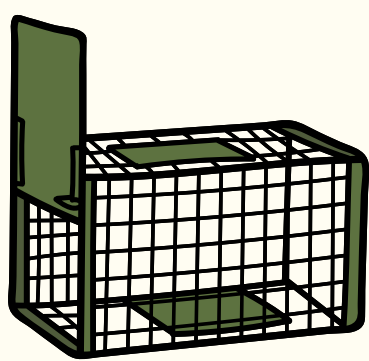

2. Exclusion

Exclude rodents from your home by sealing openings 1/4 inch or larger and rodent-proofing the perimeter fencing.

3. Include Natural Rodent Predators

Installation of owl nesting boxes or perches can encourage natural predators. Owls and hawks serve as natural pest control.

4. Catch-and-Release Traps

Remove rodents from inside your home and release them back to the wild. Be sure to prevent their return by continuing prevention and exclusion practices.

5. Non-Lethal Alternatives

Purchase deterrent devices like ultrasonic repellers, chemical repellents, or fertility control such as ContraPest.
