

Habitat Matching

Have you ever seen wild animals in your neighborhood?
There are lots of animals that also make their homes here in California!
California has many different kinds of habitats for animals.

A **habitat** is where an animal can find its food, make its nest or den, and spend most of its time.
A habitat can be a dark forest, dry desert, cold mountain, open meadow, or the ocean coast.

Draw these animals in their habitat in the boxes below!

Desert Tortoise

Brown Pelican

Northern Spotted Owl

**Redwood Forest
Habitat**

**Desert
