

What is a Wetland?

Wetlands are land that is wet! They can be wet for part of the year or for the entire year. There are names for different kinds of wetlands, like salt marsh, bog, fen, and swamp. One thing wetlands all have in common is that they are an important habitat for lots of wildlife.

Draw lines to match the pictures to the reasons why wetlands are so important.

A wetland is like a restaurant because...

it is a safe place for animals to have their babies

A wetland is like a nursery because...

it holds lots of water and protects the shoreline from waves and flooding

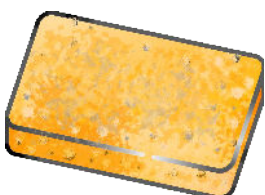

A wetland is like a hotel because...

plants filter pollutants out of the water

A wetland is like a strainer because...

it is an important food source for many different animals

A wetland is like a sponge because...

it is a place where many birds stop to rest and refuel on their long migration
